

3D Digital Art and Avatar Printing

ANVIL ADVANTAGES:

Color – Our ZCorp equipment builds in all the texture maps and cosmetic features in your model. No painting is required to build high definition models.

Cost – Our cost structure is the lowest in the industry. Pricing is based on material volume, model height, required strength and design complexity. Send us your model for a quote.

Speed – We specialize in meeting your aggressive deadlines. Our turnaround times will surprise you.

COLOR COMES TO RAPID PROTOTYPING

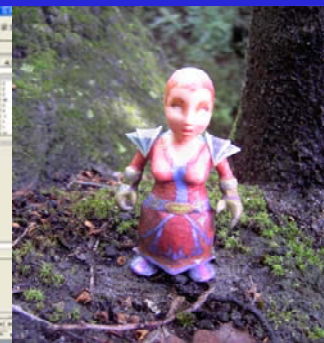

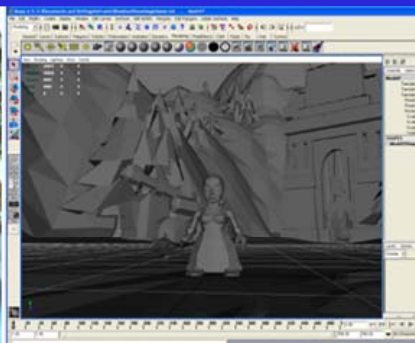

Anvil Prototype is a prototyping service that works exclusively with ZCorporation color printing technologies. Our equipment finally allows the 3D printing of color texture maps that artists and designers need to communicate their creative ideas. We are color experts and ready to help.

COMMUNICATE DESIGN DETAILS

A picture is worth a thousand words, but a color model tells a story. Present your project with a model from Anvil Prototype & Design and communicate the story behind your concept. Color three-dimensional models add credibility to your work and add detail to flat images. Additional notes and alternate textures can also be printed directly on the model to further communicate your ideas.

BUILD GAME CHARACTERS WITH OGLE

Using OGLE (i.e. OpenGLExtractor) by Eyebeam R&D we can build characters and environments from your favorite video games. OGLE allows for a 'screen grab' operation for 3D data that can then be saved into standard 3D formats. Visit: ogle.eyebeamresearch.org for more information and let Anvil produce real-world objects in full color from your virtual 3D environments.
